- Each number of the ratio is called *a term*.
- Order of the terms in a ratio cannot be reversed.

A few examples are given below.

 (a)	 (b)
Ratio of the number of small fish to the number of big fish is 5 : 1	Ratio of the number of boys to girls in above figure is 5 : 4

In the above example, the ratio of the number of small fish to the number of big fish is 5 : 1. The same information cannot be written as 1 : 5 and so, 5 : 1 and 1 : 5 are not the same.

If in a class, there are 12 boys and 12 girls, then the ratio of number of boys to the number of girls is expressed as 12 : 12 which is the same as 1 : 1.

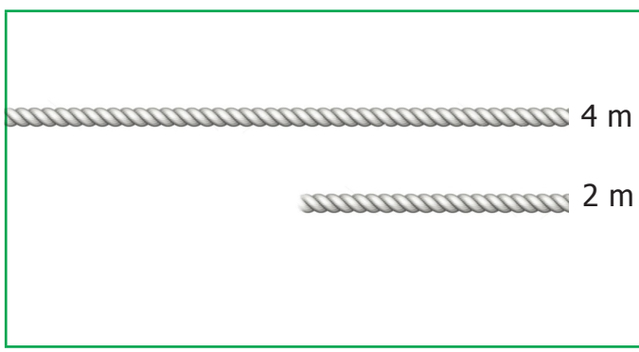

TRY THESE

If the given quantity is in the same unit, put ✓ otherwise put X in the table below.

Sl.No	Quantity	Put ✓ or X
1	5 cm and 100 cm	
2	₹ 5 and 50 oranges	
3	2 m and 75 ml	
4	7 km and 700 m	
5	3 kg of potatoes and 2 kg onions	
6	10 cm and 32 pencils	

3.2.2 Ratios in simplest form

Think about these situations
