Right angle is most common in life. Examples can be seen at cross-roads, chess board, TV, etc.

Acute Angles

Fig. 4.26

Each of the angles in the above Fig. 4.26 is less than a right angle. Angles smaller than 90º are called Acute angles.

Obtuse Angles

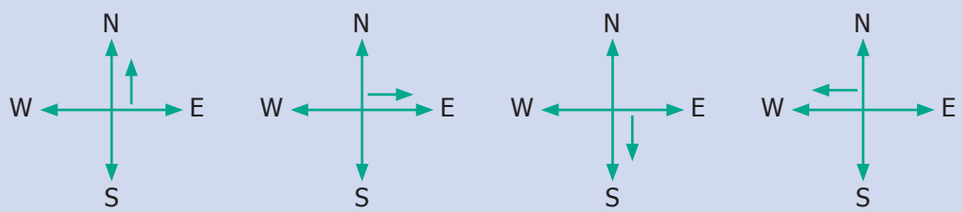

$\overrightarrow{AB}$ $\overrightarrow{AC}$ Fig. 4.27

Each of the angles in the above Fig. 4.27 is greater than right angle. If an angle is more than 90° and less than 180° is called an obtuse angle.

ACTIVITY

Stand facing the north side. Take a 'right angle turn' clockwise; you now face east. Again take another 'right angle turn' in the same direction. You now face south. Once again take another 'right angle turn' in the same direction. You now face west. Then follow the same you will come to the original position. Thus the complete turn is called one revolution. The turn from north to south will be two right angles. It is also called a straight angle. Two straight angles make one complete revolution. This is illustrated in the following figures.

TRY THESE

1. Which direction will you face if you start facing West and take three right turns clockwise?
2. Which direction will you face if you start facing North and take two right turns anti-clockwise?
