- Different separation methods are adopted depending on the properties of the components.
- Handpicking – Particles reasonably large in size to be recognised can be picked by handpicking.
- Winnowing – Adopted to separate lighter solids from heavier ones.
- Magnetic separation – Separating magnetic substances from non-magnetic substances.
- Sedimentation – Settling down of suspended, insoluble and heavy solid particles (used to separate solid – liquid mixtures).
- Decantation - Process of pouring out the clear supernatant liquid without disturbing the sediment.
- Filtration – Process of separating insoluble solid particles (residue) from a liquid (filtrate) by using a filter paper.
- Adulteration – Making things impure by the addition of a foreign or inferior substance.

Evaluation

U6TP7

I. Choose the correct answer.

1. _____ is not made of matter.
   a. Gold ring b. Iron nail
   c. Light ray d. Oil drop
2. 200 ml of water is poured into a bowl of 400 ml capacity. The volume of water will be _____
   a. 400 ml b. 600 ml
   c. 200 ml d. 800 ml
3. Seeds from water-melon can be removed by _____.
   a. hand-picking
   b. filtration
   c. magnetic separation
   d. decantation
4. Lighter impurities like dust when mixed with rice or pulses can be removed by _____.
   a. filtration b. sedimentation
   c. decantation d. winnowing
5. _____ is essential to perform winnowing activity.
   a. Rain b. Soil
   c. Water d. Air
6. Filtration method is effective in separating_____ mixture.
   a. solid-solid b. solid-liquid
   c. liquid-liquid d. liquid-gas
7. Among the following _____ is not a mixture.
   a. coffee with milk
   b. lemon juice
   c. water
   d. ice cream embedded with nuts

II. Fill in the blanks.

1. Matter is made up of _____
2. In solids, the space between the particles is less than in _____.
