Sums of the numbers on three sides of the triangle are 11, 14 and 11. Again, the totals are not the same.

Try again. Change the numbers to get a total of 12 on each side.

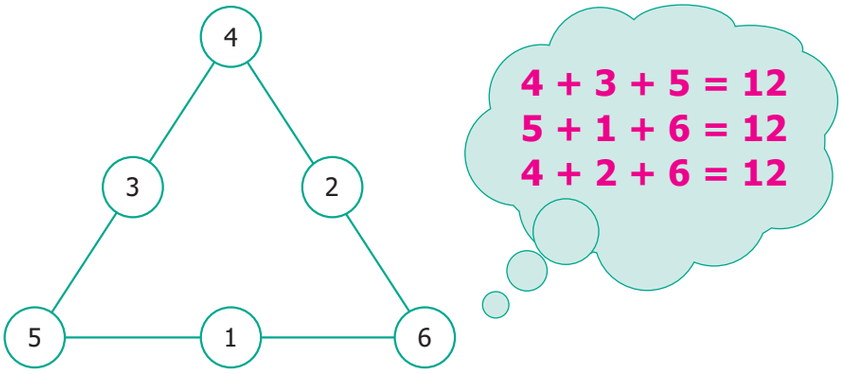

Fig. 6.17

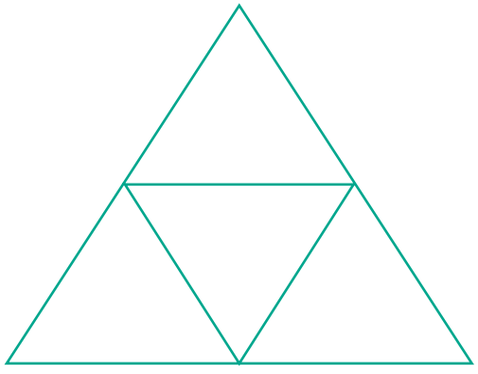

Correct placement of numbers. (first row 4, second row 3, 2 and third row 5, 1, 6) This is the desired magic triangle.

6.3.3 More figures in a figure

Examples

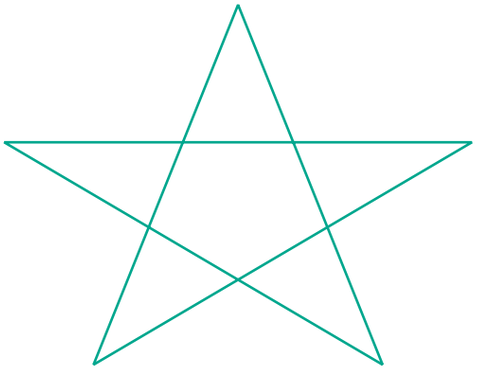

How many triangles are there in the given figures?

(i)

(a)

(ii)

(b)

Fig. 6.18

(i) Solution

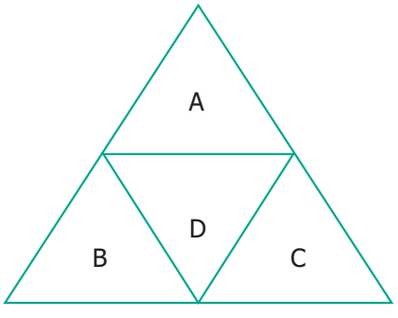

A, B, C, D are four triangles.

Combining A & D, B & D and D & C do not form any triangles.

Combining A, B & D; A, C & D and B, D & C also do not form any triangles.

Combining A, B, C & D = 1 triangle

$\therefore$ Total number of triangles = 4 + 1 = 5
